HI!

I'm Adrian, I consider myself a creative developer

For the last 6 years of my career, I have focused my attention into creating web experiences for my clients that can leave a mark, always taking into account the user experience. Along the way there have been good and bad results, I have always learned from both outcomes and moved forward.

I consider myself a creative person. Always trying to learn new things, tools and technologies that will allow me to transform an idea into reality.

During my career I have learned about graphic design, photography, video games, music... I love keeping my mind active with new concepts.

I hope you can find me of your liking and to create something together.
